Step 1:
Download Your Videos

[1A] Login to the Admin Dashboard to download your CareerViewXR VR video files or visit the Admin Support page to learn more.

Admin Dashboard

Admin Support

[Note] If you're a production partner or other entity that does not have a CareerViewXR login, please use your direct video download link and skip to step 2.

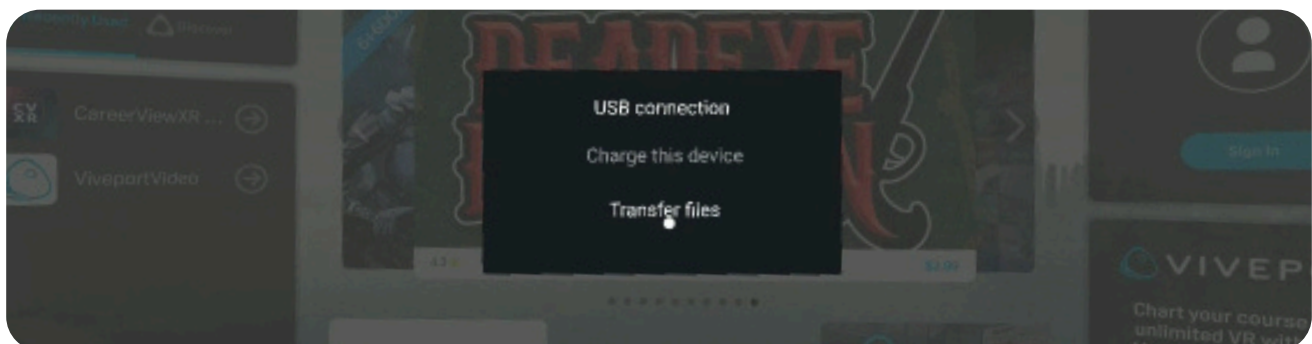

Step 2:
Connect The Headset

[2A] With the headset powered on, plug it into a PC via the USB type-C connector.

[Note] Some PCs might require a USB-to-USB Type-C Cable that supports data transfer.

[2B] Put the headset on and you will see a prompt asking to allow file transfer.

[2C] Select **Transfer files**.
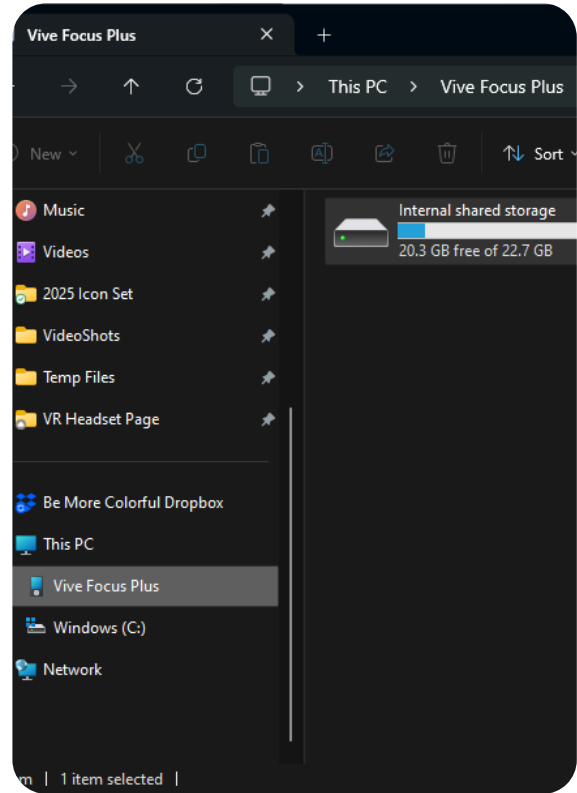

Step 3:
Loading Videos To Headset

[3A] Once the headset is allowed connection to the PC, locate the headset in Windows Explorer.

**[3B]** Click on **Vive Focus Plus** and open the internal shared storage.

Note: The VIVE Focus Plus has limited storage and can't hold the entire CareerViewXR VR video library. Solutions include assigning specific industry themes like "Healthcare" or "Construction" to multiple headsets or using a 128GB or larger SD card to store the VR files.

To view VR videos on the SD card, follow the instructions at this link:

Watch Video

**[3C]** Navigate in the device files and find the movies folder.

**[3D]** Drag the video into the movies folder.

Step 4:
Playing Videos

[4A] Locate the **Viveport Video** app. If it is not installed, it can be downloaded from the **Viveport App** store or the **Vive Business** app store.

[Note] In order to access the Viveport Store, the headset must have a web connection. Make sure to configure the headset's Wi-Fi settings.

[4B] Within the Vive Video app, navigate to local files and choose the **Movies** folder; the videos you dragged into the movies folder on the computer will show up there.

[4C] Once the video is playing, if needed, change the flat screen to 360° immersive view by going into the visual settings (eyeball icon). For a more immersive guide, **click here**.
